November 29, 1999

Dear Ms. Dixon,

- 1 [Please count me, and my family, as OPPOSED to allowing trucks carrying any kind of nuclear fuel, waste, etc. travel on route I 70 through the state of Colorado. As a resident of Glenwood Springs, Colorado, I have traveled this beautiful but dangerous road countless times. This high-mountain, steep-grade, winding road demands constant and complete driver attention to the vehicle, weather, suddenly changing road conditions, and the dangerous actions of other drivers. As you know, even a minor accident on route I 70, involving nuclear waste spillage or any form of contamination, would have a devastating impact on the people, flora and fauna in the immediate vicinity, and across many states as well. The Colorado River, which parallels route I 70, provides essential, clean drinking and recreation water to millions of people throughout the western United States. To knowingly jeopardize the health and well being of so many people by allowing the transport of dangerous substances on this highway, is negligent and unconscionable at the very least. Right now, it is also against the law. Reasonable people created this law decades ago, and it remains a timely and important safeguard for our natural and human resources across the United States.]

Again, my family and I are opposed to allowing trucks to carry nuclear material on I 70 in Colorado. Thank you for your consideration of my comments.

Sincerely,

Alison Limoges
911 Pitkin Avenue
